

## Problem 2 Neural Networks and Back-Propagation

(a)

A	B	$(A \vee \neg B) \wedge (\neg A \vee B)$
0	0	1
1	0	0
0	1	0
1	1	1

It is not possible to implement it using a perceptron.

Case  $(A=0, B=0) \Rightarrow H_1 = 0, H_2 = 0 \Rightarrow \text{Output} = 1$

Case  $(A=1, B=0) \Rightarrow H_1 = 1, H_2 = 0 \Rightarrow \text{Output} = 0$

Case  $(A=0, B=1) \Rightarrow H_1 = 1, H_2 = 0 \Rightarrow \text{Output} = 0$

Case  $(A=1, B=1) \Rightarrow H_1 = 1, H_2 = 1 \Rightarrow \text{Output} = 1$

(b)

(i)

The sigmoid function:  $g(x) = 1/(1+e^{-x})$   $g(x)' = g(x)*(1-g(x))$

$D_{in} = 0.3*0.3 + 0.8*0.3 + 0.1*0.3 + 1*0.2 = 0.56$

$$D_a = g(0.56) = 0.6365$$

$$E_{in} = 0.3 \cdot -0.1 + 0.8 \cdot -0.1 + 0.1 \cdot -0.1 + 1 \cdot 0.2 = 0.08$$

$$E_a = g(0.08) = 0.5200$$

$$F_{in} = 0.636 \cdot 0.3 + 0.52 \cdot -0.1 + 1 \cdot 0.2 = 0.3388$$

$$F_a = g(0.3388) = 0.5839$$

The output of D is 0.6365, the output of E is 0.5200 and the output of F is 0.5839.

(ii)

$$\Delta F = (1 - 0.5839) \cdot 0.5839 \cdot (1 - 0.5839) = 0.1011$$

$$\Delta D = 0.6365 \cdot (1 - 0.6365) \cdot 0.3 \cdot 0.1011 = 0.0070$$

$$\Delta E = 0.52 \cdot (1 - 0.52) \cdot -0.1 \cdot 0.1011 = -0.0025$$

$$wdf = 0.3 + 0.2 \cdot 0.6365 \cdot 0.1011 = 0.3129$$

$$wef = -0.1 + 0.2 \cdot 0.5200 \cdot 0.1011 = -0.0895$$

$$w1f = 0.2 + 0.2 \cdot 1 \cdot 0.1011 = 0.2202$$

$$wad = 0.3 + 0.2 \cdot 0.3 \cdot 0.0070 = 0.3004$$

$$wae = -0.1 + 0.2 \cdot 0.3 \cdot -0.0025 = -0.1002$$

$$wbd = 0.3 + 0.2 \cdot 0.8 \cdot 0.0070 = 0.3011$$

$$wbe = -0.1 + 0.2 \cdot 0.8 \cdot -0.0025 = -0.1004$$

$$wcd = 0.3 + 0.2 \cdot 0.1 \cdot 0.0070 = 0.3001$$

$$wce = -0.1 + 0.2 \cdot 0.1 \cdot -0.0025 = -0.1001$$

$$w1d = 0.2 + 0.2 \cdot 1 \cdot 0.0070 = 0.2014$$

$$w1e = 0.2 + 0.2 \cdot 1 \cdot -0.0025 = 0.1995$$
